WEEK IN REVIEW:

Looking back on this week I would say that it was for the most part not difficult but like always it challenged and pushed us all. We all know what to expect by now but that is what is good about this class, even though we know what is expect it still challenges us to get it done while striving to make us learn about ourselves and our profession. Not to mention the Career Module is due as well so for some we have to do these assignments and the Career Module's assignments. Other than that the only difficulty I had was figuring out my own personal layout to our Cost Analysis assignment but as soon as I figured out how I wanted it to look it was simple to do. Not to mention while we had to compute our costs according to a \$45/hr pay rate I logged my time in minutes so I simply had to figure out how much that was per minute then apply that rate in place of the hourly rate.

REFLECT AND CONNECT:

So this week my time management was probably at the best it has been all month which is good considering not only did we have these assignments due but also the Career Module's assignments. So now I really can see how I have progressed from this class considering I got all my work done and in a timely manner. So if I would have to gauge my performance this week I would have to say good. I would say that I improved on my skill this week. And the skill that increased would have to be my task completing skill. Because I knew when and what to work on I was able to properly focus on that one task and thus get it done rather quickly. Continuing on from here I would say that my planning and execution will only improve thus making me and even more time efficient worker which is always a good skill to have. Being a time efficient worker will help in my career because I will be just that much more faster than others who are trying to get my same job so I will have another advantage hopefully getting me that job.
